

Preservative Free

**Why are we now
labeling our saline
TSA compliant?**

See back side of this card.

4 fl. oz. (120 ml)

LA 3270/A

According to the TSA rules for Travelers with Disabilities and Medical Conditions:

You may bring all prescription and over-the-counter medications (liquids, gels, and aerosols) including petroleum jelly, eye drops, and saline solution for medical purposes. You are allowed reasonable amounts over 3.4 ounces (100ml) of the items above in your carry-on baggage, but you will need to perform the following:

1. Separate these items from the liquids, gels, and aerosols in your quart-size and zip-top bag.
2. Declare you have the items to one of our Security Officers at the security checkpoint.
3. Present these items for additional inspection once reaching the X-ray. These items are subject to additional screening.

It may be helpful to bring this card with you to the airport. Not all security personnel at the airport are aware of the special rules for medical-use saline.
