User Instructions

Please read carefully before operating your PuriLens® System.
IMPORTANT SAFEGUARDS

When using electrical products, especially when children are present, basic safety precautions should always be followed, including the following:

Read All Instructions Before Using The System.

DANGER

- Do not use while bathing.
- Do not place where it will fall into a tub or sink.
- Do not drop the unit in water or other liquid.
- Do not reach for your PuriLens® unit if it has fallen into water. Unplug immediately.

WARNING

- Close supervision is necessary when this product is used by a child.
- Use this system for its intended use as described in this booklet.
- Do not use this device if the cord or plug is damaged, the unit is damaged, dropped in water, or not working properly.
  Return the unit to PuriLens®.
- Keep the cord away from heated surfaces.
- Never operate on a soft surface, such as a bed or couch.
- Do not use outdoors or operate where oxygen is being administered.
- Connect to a properly grounded outlet only.
- Follow instructions for filling unit. Do not overfill.

Problems With Contact Lenses And Lens Care Products Could Result In Serious Injury To The Eye.

It is essential that you follow your eyecare practitioner’s directions and all labeling instructions for proper use of your lenses and lens care products.

For additional detailed information refer to the accompanying package insert.

Save These Instructions.
Congratulations on Selecting PuriLens®

The PuriLens® System represents the most convenient and advanced technology for contact lens care.

The PuriLens® System is indicated for cleaning and disinfection of soft (hydrophilic) contact lenses by means of subsonic agitation to remove lens deposits and microorganisms, and ultraviolet irradiation of the storage solution for disinfection. Lenses may be stored in the disinfection solution for a period of 24 hours following the cleaning and disinfection cycle.

PuriLens® is a complete cleaning and disinfecting contact lens care system clinically tested for use with preservative-free PuriLens® Solution. It cleans and disinfects lenses without use of heat, chemicals, surfactants, catalytic discs, or enzymatic tablets.

The PuriLens® System uses germicidal light to disinfect your lenses and subsonic solution turbulence to remove debris from the lens surface. The ease of use and convenience of the PuriLens® System will assure you care for your contact lenses properly. Proper lens care is one of the most important factors in maintaining wearing comfort and eliminating eye irritation and other potential complications associated with contact lens wear.
PuriLens® Operating Instructions

The PuriLens® unit may be set up in any convenient location and remain plugged in between uses. Be careful not to allow the unit to remain on a wet surface. Prior to first use, you must run the unit without your lenses in it. This will thoroughly clean the PuriLens® unit prior to the first time operation with lenses. The travel cap should always be removed from the cleaning chamber during the cleaning/disinfecting cycle.

1. Wash your hands thoroughly. Remove the top cover. Remove the clear cleaning chamber from the base, and remove the lens holder.

2. Remove your left lens and rinse it with a steady stream of PuriLens® Solution for 10 seconds. Place your left lens in the center of the raised dome on the side marked “L”. Close the WHITE lid. Repeat the same steps for your right lens and close the BLUE lid.

3. Hold lens holder by top of the “T” and place into a pair of slots in the top of the cleaning chamber. Fill with PuriLens® Solution to cover the top of the lens basket, and even with the fill line.
Wash hands thoroughly.

4. Locate the recessed ridge inside the base. Line up the ridge on the chamber (near the blue agitator) with the front of the unit. Slowly rotate the chamber until it drops into the base. DO NOT FORCE THE CHAMBER INTO THE BASE.

5. Connect transformer cord into adapter and plug transformer into wall outlet. Note: Unit may remain plugged in when not in use.

6. Place the upper part of the unit onto the bottom part. This will automatically start the cleaning and disinfecting cycle. DO NOT OPERATE THE UNIT WITH THE CLEAR LID ON THE CLEANING CHAMBER.

7. The indicator light will go on and remain on until the device shuts off automatically after 15 minutes when cycle is complete. Note: Your lenses will remain disinfected for up to 24 hours after the cycle is complete provided the chamber is not opened.
Reinserting the Lenses  
Wash hands thoroughly.

1. Remove the upper part of the unit and remove the lens holder.

2. Open the lens holder and remove one of the lenses by simply touching the lens with your finger tip. Insert the lens, and repeat these steps for the second lens.

3. Discard the used solution from the cleaning chamber. NEVER REUSE SOLUTION. It will not remain sterile and can breed harmful organisms. Leave the upper part of the unit off to allow all parts to air dry, including condensation on the bulb.

4. The cleaning chamber with clear travel lid is portable, and may be carried with you to store your lenses should they need removal while away from home. Lenses must be disinfected prior to re-insertion in your eyes.
Important Information

Since the PuriLens® System disinfects your lenses with germicidal light, it is normal for the unit to warm up slightly during operation and to generate a glow around the upper part of the unit.

To insure the completion of the cleaning/disinfection process, do not interrupt the cycle. Reactivating of the unit occurs when the top is removed and replaced. This will restart the cycle from the beginning.

Should the indicator light not turn on, please refer to the troubleshooting section in this booklet.

Upon completion of the cycle, the lenses may remain in the cleaning chamber for up to 24 hours provided chamber is not opened.

To avoid potential damage to your lenses or your eyes, please follow these important instructions:

DO NOT OPERATE UNIT WITH CLEAR TRAVEL LID ON THE CLEANING CHAMBER.

DO NOT RE-USE SOLUTION.

DO NOT USE TAP WATER.

DO NOT USE SOLUTIONS WHICH ARE NOT APPROVED FOR THE PURILENS® UNIT.

Insert the lens holder first. Then fill the chamber with solution. DO NOT UNDER-FILL OR OVER-FILL THE CLEANING CHAMBER.

DO NOT OPERATE THE DEVICE ON A WET SURFACE.

Should any solution drip from the device, remove the top, and wipe the excess solution and restart.

Always use fresh PuriLens® Solution in your PuriLens® unit.
Supplemental Lens Care

Some contact lens wearers may experience a heavier deposit build up on their lenses. Symptoms of this problem include lens irritation and/or reduced wearing comfort. In such cases your lenses should be rubbed manually and rinsed with PuriLens® Solution once a week prior to your routine use of the PuriLens® System. Consult your eye care practitioner for additional information or recommendations.

PuriLens® System Maintenance

The cleaning chamber of the unit should be cleaned once a week to remove accumulated deposits. Clean any accumulated debris using a cotton swab dampened with PuriLens® Solution.

The germicidal lamp in the top of the unit should be kept clean and free of debris. Should debris accumulate on either the lamp or the upper housing, remove with a cotton swab or a soft cloth dampened with PuriLens® Solution.

Discoloration of the inside of the unit and top of the lens basket is a normal reaction to the germicidal light and cannot be cleaned. No maintenance is required for the blue agitator at the bottom of the cleaning chamber or the lens holder.
Troubleshooting

CAUTION: It is possible that the UV bulb in your PuriLens® System unit could burn out, or the subsonic agitator could malfunction. Should the UV bulb fail, the indicator light on the front of the unit will not come on when the top portion of the unit is engaged. Do not use your PuriLens® unit if you fail to see a glow in the upper chamber, or if you fail to feel a slight vibration in the upper chamber after the top is placed on the unit. Call PuriLens® if this occurs.

Problem: **Lenses are not getting clean.** Follow these steps:

1. Remove the cleaning chamber and clean thoroughly.
2. Place the cleaning chamber in base and follow instructions for use.
3. Verify that the agitator is working properly by placing the top on the unit and feeling for a slight vibration in the lower chamber.
4. Make sure you use fresh PuriLens® Solution daily. No other solution has been clinically tested for cleaning with the PuriLens® System.
5. For optimum results, clean and disinfect daily with the PuriLens® System.
6. If problems persist, consult your eye care professional.

Problem: **Indicator light is not working.** Follow these steps:

1. Check the cord for proper connection with the transformer.
2. Check if the power transformer is plugged into the wall outlet.
3. Check that the top part of the unit is properly seated in and aligned with the bottom part.
4. Check that the germicidal lamp filament is not broken.
Warranty

This product carries a 90-day limited warranty against faulty material and workmanship. This warranty does not include damage to the product resulting from accident, misuse, improper installation or operation. If the product should become defective within the warranty period, it will be repaired or replaced, free of charge, at the company’s option. The consumer’s sole remedy shall be such repair or replacement as is expressly provided above, and the company shall in no event be liable for any incidental or consequential damages arising out of the use or inability to use this product for any purpose whatsoever.

Some states or provinces do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. This warranty gives you specific rights. You may also have other rights.

Your warranty will be extended provided you follow these directions:

1. Purchase PuriLens® Solution from an authorized re-seller such as your practitioner or directly from PuriLens®

2. Use only PuriLens® Solution in your PuriLens® System.

SHOULD ANY COMPONENTS APPEAR DEFECTIVE, CALL PURILENS AT 1-800-622-0777.
PuriLens® Solution

Preservative-free PuriLens® Solution has been specifically developed for use with the PuriLens® unit. The effectiveness of other products with the PuriLens® unit has not been demonstrated or clinically tested.

PuriLens® Solution does not contain any preservatives such as CHLORHEXIDINE, THIMEROSAL, or any other MERCURY-containing preservative compounds. Contact lens care solutions that contain preservatives, or any other solution not approved by the company, should not be used with this system. Use of these solutions in the PuriLens® device may affect device performance, may damage your lenses, and negate your warranty.

PuriLens® Solution Reorder

A supply of fresh PuriLens® Solution may be purchased from your practitioner or directly from the company.

For your convenience PuriLens® Solution is supplied in packages of 12 sterile 4-fl. oz. (120-ml) safety sealed bottles. This 12 pack is approximately a three month supply of solution. For pricing and order information please contact your eye care practitioner, or contact PuriLens® toll-free at 1-800-622-0777 or visit us on-line at www.purilens.com.
Warnings to Contact Lens Wearers

PROBLEMS WITH CONTACT LENSES AND LENS CARE PRODUCTS COULD RESULT IN SERIOUS INJURY TO THE EYE.

It is essential that you follow your eye care practitioner’s directions and all labeling instructions for proper use of your lenses as well as your lens care system.

EYE PROBLEMS, INCLUDING CORNEAL ULCERS, CAN DEVELOP RAPIDLY AND LEAD TO LOSS OF VISION. THEREFORE, IF YOU EXPERIENCE EYE DISCOMFORT, EXCESSIVE TEARING, VISION CHANGES, OR REDNESS OF THE EYE, IMMEDIATELY REMOVE YOUR LENSES AND PROMPTLY CONTACT YOUR EYE CARE PRACTITIONER.

All contact lens wearers must see their eye care practitioner as directed. If your lenses are for extended wear, your eye care practitioner may prescribe more frequent visits. PuriLens® Solution is sterile prior to opening. Because it contains no preservatives, it will not remain sterile indefinitely after opening and, therefore, should not be used as an eyedrop.

DO NOT USE IF SOLUTION IS CLOUDY OR DISCOLORED.

To avoid contamination, do not touch tip of container to any surface. Replace cap after use. Do not re-use solution. Do not transfer solution to another container. Fresh PuriLens® Solution should be used for every cleaning/disinfecting cycle.
WARNINGS

• DO NOT operate your PuriLens® Unit if the unit is wet. Dry exterior surfaces before using.

• DO NOT touch the PuriLens® System Unit or the removable plug with wet hands.

• DO NOT use while bathing.

• DO NOT place or store product where it can fall or be pulled into a bath or sink.

• DO NOT place or drop into water or other liquid.

PRECAUTIONS

• Close supervision is necessary when this product is used by, on, or near children or invalids. This is not a toy for children.

• Never operate this product if it has a damaged cord or plug, if it is not working properly, if it has been dropped or damaged, or dropped in water.

• DO NOT use outdoors or operate where aerosol products are being used or where oxygen is being administered.

• DO NOT place or store the product where it can fall or be pulled into a bath or sink.

• Electrical shock can occur if the unit is wet or if the electrical plug is not completely engaged in the receptacle.
Adverse Reactions

The following problems may occur:

Stinging, burning, or itching (irritation) of the eyes. Excessive watering (tearing) of the eye. Unusual eye secretions. Redness of the eyes. Reduced sharpness of vision (visual acuity). Blurred vision. Sensitivity to light (photophobia). Dry eyes.

If you notice any of the above problems, immediately remove and examine your lenses. If a lens appears to be damaged, do not reinsert. Consult your eye care practitioner. If problems stop and the lenses appear to be undamaged, clean/disinfect your lenses again, and then re-insert them into your eyes. If the problem continues, immediately remove your lenses and consult your eyecare practitioner.

If any of the above problems persist, a serious condition such as infection, corneal ulcer, neovascularization, or iritis may be present. Remove your lenses and seek immediate professional identification of the problem in order to avoid serious eye damage.

For more information, see your INSTRUCTIONS FOR WEARERS booklet for your specific contact lenses.

EMERGENCY (ALTERNATIVE) METHODS FOR DISINFECTION:

If your care system is not available, you may elect to place your lenses inside a tightly closed lens case filled with saline solution.

Place the closed lens case in a pan of already boiling water for at least 10 minutes. (Above an altitude of 7,000 feet, boil for at least 15 minutes.) Be careful not to allow the water to boil away. Remove pan from heat and allow to cool for 30 minutes to complete disinfection of the lenses.

NOTE: USE OF THE PURILENS® SYSTEM SHOULD BE RESUMED AS SOON AS POSSIBLE.
Product Description

The PuriLens® unit is an electronic, one-step device for cleaning and disinfecting contact lenses. It should be operated in conjunction with PuriLens® Solution.

deposits and microorganisms, and ultraviolet irradiation of the surrounding storage solution for disinfection. The lenses may be stored in the disinfection solution for a period of 24 hours following the cleaning and disinfection cycle.

Indications

The PuriLens® System is indicated for the cleaning and disinfection of soft (hydrophilic) contact lenses by means of subsonic agitation to remove lens

Contraindications

None known.

Other Information

The PuriLens® System lamp is a special germicidal lamp (not a regular light bulb). The lamp is supplied in the Germicidal Lamp Assembly.

Use only the adapter that came with your PuriLens® unit.

The lot number of your PuriLens® unit is printed on the bottom of the device.
